

## Services: Nanotech Risk Management

### WHAT WE DO:

- Provide our clients with on-going interpretation of the results of studies and evaluations by research institutions and governmental agencies related to environmental, health and safety issues of emerging nanotechnologies, and how they affect their business.

-

Track government regulations related to nanotechnologies and how they affect the business of our clients.

-

Provide risk managers with strategies to help minimize their company exposures.

-

Provide insurance carriers and brokers with up-to-date information on nanoproduct risks, and support development of options for insurance policy coverage for their nanotechnology insureds.

-

Provide the financial services community an understanding of the potential liabilities of nanoproducts, so that together we can craft appropriate preventive strategies to assure that investments produce desired results and avoid adverse risk.
